

# Saksham Mahajan

✉ sakshammahajan2004@gmail.com • 🌐 sakshammjn.dev • in sakshammjn  
Software Engineer — Full Stack Developer

Aspiring Software Engineer with strong problem-solving skills and a deep understanding of data structures, algorithms, operating systems, and computer networks. Experienced in developing backend applications and REST APIs. Passionate about building scalable systems and continuously learning low-level and distributed computing concepts.

## Experience

### RKIT Software

Full Stack Developer

Gujarat, India

Jan 2026 - Present

- Contributed to Auto Projects, an internal release-automation system for RKIT's Miracle Accounting Software platform (100,000+ customers), working within the "Auto" team spanning Build, DB, Publish, and Test pipelines on a .NET/C, ServiceStack, and MySQL (OrmLite) stack.
- Built the Data Mismatch Check (DMC) module end-to-end across 3 codebases, automating staged-vs-live company data validation; root-caused a class-level state-overwrite bug causing false-negative verdicts and cut per-company DB round-trips by batching multiple SELECT queries into a single templated API call.
- Re-engineered the batch company-movement module by consolidating 3 approval/validation methods into one atomic handler, resolving a mid-batch race condition across 4 distinct pairing states, and adding cross-batch idempotency guards to improve reliability.

### Ural Federal University

Summer Intern

Russia

Jul-Aug 2025

- Selected by the Russian government for a competitive two-week international program at Ural Federal University; completed the economics track through lectures on and delivered a final presentation, alongside industrial visits (including Sberbank) and cross-cultural exchange activities.
- Led the final 3-day hackathon project as part of a 8-person, 5-country team, building an economic-impact dashboard modeling nuclear isotope applications across medicine, agriculture, and industry.
- Placed top 5 of 21 international teams at the HackAtom hackathon, hosted by Russia's nuclear government agency (Rosatom).

## Projects

### Aspire (Rosatom HackAtom)

Software Engineer

TypeScript, React, Python, scikit-learn, PostgreSQL

2025

- Built an ML-powered interactive application at HackAtom, Rosatom's international hackathon, that turns verified datasets on non-energy nuclear applications into live, explorable predictions.
- Contributed across the stack: trained the machine learning model in Python (scikit-learn), built the React/TypeScript frontend, and integrated a PostgreSQL-backed data layer.
- Designed the application to make the economics of isotopes in medicine, agriculture, and industry understandable to a general audience through an interactive, quiz-like interface.
- Placed top 5 of 21 international teams, built in a 36-hour sprint judged on originality, technical execution, and clarity of the final application.

### Learnova (Odoo x SVNIT Hackathon)

Backend Developer, Top 10/2100

React, Node.js, Express, MongoDB, OpenAI API, YouTube Data API

2025

- Built the backend for an adaptive learning platform where users take a quiz on any topic, and incorrectly answered questions trigger targeted YouTube videos via the YouTube Data API to reinforce weak areas.
- Integrated an LLM (OpenAI API) to auto-generate a follow-up quiz tailored to the concepts the user got wrong, closing the feedback loop between assessment and remediation.
- Designed Node.js/Express API endpoints and MongoDB schemas to handle quiz generation, scoring, and adaptive content delivery.

### Phishing Website Detection

Machine Learning Developer

Python, scikit-learn, Feature Engineering, ML

2024

- Built a machine learning system that classifies websites as legitimate or phishing, combining a cybersecurity background with applied ML.
- Engineered features from URL structure, domain signals, and page content to train a scikit-learn classification model.
- Collaborated with a 2-person team to design the feature pipeline and evaluate model performance across the classification task.

### Wimpy's List – Browser To-Do List

Chrome Extension Developer

JavaScript, Chrome Storage API, Web Audio API, Manifest V3

2024

- Built a Chrome extension delivering a hand-drawn, cartoonish to-do list in the browser popup, with satisfying sound feedback on add and delete.
- Used the Chrome Storage API for local persistence, so tasks remain available across browser sessions without any backend.

## Education

### G H Patel College of Engineering & Technology

B.Tech in Computer Science and Engineering, CGPA: 9.49/10

Gujarat, India

2022–2026

## Technical Skills

**Languages:** C#, C++, Python, Java, TypeScript/JavaScript, SQL, Bash

**Full-Stack:** .NET/C#, ServiceStack, React, Node.js/Express, Flask

**Databases:** MySQL (OrmLite), PostgreSQL, MongoDB

**ML & Data:** scikit-learn, Feature Engineering, LLM/OpenAI API Integration

**Systems:** Linux, Multithreading, Memory Management, OOP, Data Structures & Algorithms

**Tools:** Git, TFS, Docker, GitHub Actions
